

Emirates Airlines Executive Performance Dashboard

PROJECT CASE STUDY • DATA ANALYTICS / BUSINESS INTELLIGENCE

Project Overview

An interactive Power BI executive dashboard for Emirates Airlines that brings revenue, expenses, profit, bookings, customers, flights, cancellations, ticket prices, payment methods, and flight status into one consolidated reporting interface.

Objective

To create an executive performance view that enables users to monitor airline financial and operational KPIs and explore performance using Year, Month, Category, and Payment Method filters.

Tools & Technologies

Microsoft Power BI • DAX • Data Modeling • Interactive Visualizations • Executive Reporting

Approach & Workflow

- Structured the dashboard around high-level financial and operational KPIs.
- Used Power BI visualizations to compare trends, categories, payment methods, and flight status.
- Presented revenue, expense, profit, and margin information through KPI cards and charts.
- Added interactive filters for Year, Month, Category, and Payment Method.
- Included detailed views such as top revenue-generating flights and ticket-price indicators.

Dashboard Analysis

- Revenue Trend — visualizes monthly revenue movement.
- Monthly Bookings — compares booking volume across months.

- Ticket Bookings by Category — shows category-level booking distribution.
- Profit vs Revenue — compares total revenue, profit, and expenses.
- Payment Method by Revenue — analyzes revenue contribution by payment method.
- Flight Status — summarizes completed, delayed, and cancelled flights.
- Top 5 Revenue by Flights — identifies high-revenue flights.
- Average, Maximum, and Minimum Ticket Price — provides pricing indicators.

Key Insights

- The dashboard reports AED 1.75B total revenue, AED 238M total expenses, and AED 1.51B total profit.
- 18.23K bookings and 8,362 customers are represented.
- The dashboard covers 4,878 flights and reports 2,965 cancellations.
- Profit margin is displayed as 86.37%.
- Interactive filters allow executives to narrow the analysis by year, month, booking category, and payment method.

Key Dashboard Metrics

Metric	Value
Total Revenue	AED 1.75B
Total Expenses	AED 238M
Total Profit	AED 1.51B
Total Bookings	18.23K
Total Customers	8,362
Total Flights	4,878
Cancellations	2,965
Profit Margin	86.37%

Outcome

The completed Power BI dashboard provides a consolidated executive view of airline performance. It allows decision-makers to move from headline KPIs into revenue trends, booking patterns, payment behavior, flight status, pricing, and flight-level performance.

Interview Focus

This project demonstrates practical ability to translate business data into an interactive dashboard, select meaningful KPIs, analyze performance trends, and communicate insights through clear visualizations.
