

Mercedes-Benz Sales Dashboard

PROJECT CASE STUDY • DATA ANALYTICS / BUSINESS INTELLIGENCE

Project Overview

An interactive Excel dashboard designed to provide an executive-level view of Mercedes-Benz sales performance across 2025–2026. The dashboard consolidates revenue, profit, units sold, customer rating, profit margin, and average selling price into a single decision-support view.

Objective

To transform vehicle sales data into a clear management dashboard that makes revenue, profitability, product, fuel-type, dealer, year, and regional performance easier to monitor and compare.

Tools & Technologies

Microsoft Excel • PivotTables • Charts • Data Analysis • Interactive Filters

Approach & Workflow

- Organized and analyzed the sales data in Excel.
- Created KPI views for revenue, profit, units sold, customer rating, profit margin, and average selling price.
- Built interactive filtering for sale date, fuel type, year, and region.
- Developed trend and comparison visuals for monthly revenue, vehicle models, fuel types, and dealers.
- Arranged the dashboard into a compact executive reporting layout.

Dashboard Analysis

- Revenue by Month — tracks monthly sales movement.
- Top 5 Revenue by Model — identifies the highest-revenue vehicle models.
- Revenue by Fuel Type — compares Diesel, Electric, Hybrid, and Petrol contribution.

- Top 5 Revenue by Dealers — compares dealer-level revenue performance.
- KPI cards — summarize overall business performance.

Key Insights

- The dashboard reports total revenue of █14,045.5M and total profit of █2,039.8M.
- 1,507 units are represented in the dashboard, with an average customer rating of 4.30.
- Profit margin is shown as 14.52%, while average selling price is █9.9M.
- Interactive year, fuel-type, region, and date controls allow performance to be explored from different business perspectives.

Key Dashboard Metrics

Metric	Value
Total Revenue	█14,045.5M
Total Profit	█2,039.8M
Units Sold	1,507
Avg. Customer Rating	4.30
Profit Margin	14.52%
Avg. Selling Price	█9.9M

Outcome

The final dashboard turns a multi-dimensional vehicle sales dataset into an executive-friendly Excel report. It helps users quickly compare product, fuel-type, dealer, regional, and time-based performance without manually inspecting raw data.

Interview Focus

This project demonstrates practical ability to translate business data into an interactive dashboard, select meaningful KPIs, analyze performance trends, and communicate insights through clear visualizations.
